EDUCATION

Towson University — **Baltimore, MD**
B.S. in Computer Science — *Expected Graduation, May 2027*

- **Concentration:** Software Engineering Track
- **GPA:** 3.74/4.00, *Dean's List (spring '23, fall '24, spring '25, fall '25, spring '26)*
- **Related Coursework:** Intro to Computer Science I & II, Calculus I, Calculus II, Discrete Math, CSIT101 (MS Office), Intro to Cyber Security, Data Structures & Algorithm Analysis, Intro to Statistical Methods, Software Engineering, Data Communications & Networking, Programming Languages: Design & Implementation, Operating Systems, Database Management Systems, Object Oriented Programming, Software Quality Assurance & Testing

Certifications: Intro to Python 3**,** Data Structures & Algorithm (Python), AWS Certified Cloud Practitioner

EXPERIENCE

Johnson & Johnson — **Raritan, NJ**
JJT Business Intelligence Analyst Intern — *May 2026 – Aug 2026*

- Engineered a Copilot Agent to deliver natural language insights across 199+ backlog items spanning multiple teams, supporting leadership during sprint planning and backlog review.
- Developed Power BI data visualizations for End User Services, including an embedded dashboard giving business partners visibility into 4+ upcoming capability releases.
- Served on the Technology Intern/Co-op Council (TICC) development pillar, leading the planning of an employee-led session teaching 50+ interns how to present with impact.

Towson University — **Baltimore, MD**
Undergraduate Research Assistant — *March 2026 – Present*

- Built a Docker-based GitHub Action that automates mutation testing on Java/Maven projects via PIT, javalang AST parsing, and Word2Vec embeddings in a self-testing CI/CD pipeline.
- Delivered an end-to-end Phase 1 pipeline processing 36 generated mutants (86% raw mutation score), with classification targeting ~94% F1-score per Pugh et al. (2025).
- Resolved cross-platform CI/CD environment issues (line-ending conflicts, JAVA_HOME misconfiguration), shipping a GitHub Action with 5 configurable inputs and 5 outputs.

Headstarter AI — **Baltimore, MD**
Software Engineer Fellow — *July 2024 – Sept 2024*

- Gained mid-level proficiency in frontend, backend, cloud, and machine learning stacks across 3-4 real-world projects, applying DSA, systems design, and OOP principles.
- Presented projects to large audiences, connected with 50+ software engineers, and developed strong communication skills to build rapport with peers and stakeholders.

PROJECTS

Flaky Test Prediction Without Re-Runs — **Baltimore, MD**
5-Person Research Team | Software Engineering Research Project — *Feb 2026 – May 2026*

- Led feature engineering and pipeline architecture for a 5-person research project predicting Java test flakiness from static source code alone, with no test execution required.
- Built a static feature extractor and file-to-label matching pipeline across 24 open-source Java projects, producing 46 structural/AST features and 12,699 matched tests.
- Diagnosed and fixed a class-imbalance/feature-leakage bug invalidating early results, then tuned LightGBM + SMOTE to F1=0.667, beating smell-only (F1=0.196) and history-based (F1=0.480) baselines.

Student Task Manager — **Baltimore, MD**
Team CODEJ | Class Project — *Sept 2025 – Dec 2025*

- Built a full stack web application using React, Spring Boot, and MongoDB, delivering core features across 3 Agile sprints.
- Authored 10+ software use cases and UML diagrams defining task workflows, reducing requirement ambiguity and development rework.
- Designed API level integration for AI driven task prioritization and study scheduling in Spring Boot, automating task ranking based on deadlines and priorities.

Fake News Forensic – AI-Powered Misinformation Detection — **Baltimore, MD**
Solo Capstone Project, Kaggle Gen AI Intensive Course (Q1 2025) | *Medium Article* | *Presentation Video* — *Mar 2025 – April 2025*

- Built a Generative AI pipeline analyzing 44,898 news articles, achieving 93% semantic retrieval accuracy using embeddings and FAISS vector search.
- Reduced manual fact-checking time by 80% through real-time analysis with OpenAI GPT-4, Google Gemini, and NewsAPI.
- Increased misinformation summarization clarity by 35%, employing Retrieval-Augmented Generation (RAG)

ACTIVITIES AND LEADERSHIP

Corporate Relations Officer — **Baltimore, MD**
National Society of Black Engineers (NSBE), Towson U. Throne Chapter — *May 2026 – Present*

- Hosted an interview prep workshop for 20+ students covering the STAR method, elevator pitches and behavioral vs technical interviews with live practice.
- Lead outreach to recruiters and companies to build partnerships and pursue funding opportunities for the chapter.
- Invited a fintech software engineer and medtech technical leaders to speak at chapter meetings and served as the point of contact to build lasting relationships with both companies.

Resident Assistant — **Baltimore, MD**
Barton House, Towson University — *Aug 2025 – Present*

- Supervised and supported a residential community of 40+ students, promoting safety, inclusion, and academic success.
- Responded to and resolved 20+ incidents per semester while enforcing university policies and maintaining a positive living environment.
- Planned and facilitated 10+ educational and social programs each semester, boosting resident engagement and community participation by 30%.

SKILLS

Languages: Java, Python, JavaScript, HTML/CSS, SQL
Frontend: React.js, Next.js, Material UI, Tailwind CSS
Backend & Databases: Spring Boot, Node.js, Express.js, Firebase/Firestore, MongoDB, MySQL
AI & Data Tools: LLM APIs, FAISS, SentenceTransformers, Pandas, NumPy, LightGBM, XGBoost, scikit-learn
Business Intelligence: Power BI, Power Query (M), DAX, Microsoft Copilot Studio, Office 365
Dev Tools & Platforms: Git/GitHub/GitLab, VS Code, IntelliJ, Docker, Maven, PIT, Vercel, Hostinger, Eclipse, Junit, YAML, Shell Scripting, AWS
Practices & Methodologies: Agile, Authentication, CI/CD, NLP, Retrieval-Augmented Generation (RAG), Mutation testing, Unit testing, OOP
